

RESULT: LOW CLOT RISK (71.5% confidence)

Patient Clinical Details

Age:	28 years
Sex:	Male
Resting Blood Pressure:	89 mm Hg
Cholesterol:	243 mg/dl
Max Heart Rate:	127 bpm
Fasting Blood Sugar >120:	Yes
Chest Pain Type:	Non-Anginal
Exercise Induced Angina:	Yes
ST Depression:	2.0
ST Slope:	Flat
Major Vessels (0-3):	0
Thalassemia:	Fixed Defect

Risk Assessment Summary

AI Risk Classification:	LOW RISK
Model Confidence:	28.5%
Model Used:	XGBoost Classifier

Interpretation: The AI model found no significant combination of risk factors at this time. Maintain a healthy lifestyle and attend routine medical checkups.

AI Explanation - Key Risk Factors (SHAP)

The chart below shows which patient features most influenced the AI prediction. Positive values increase risk while negative values reduce risk.

Blood Clot Risk Assessment Report

Recommendations

1. Maintain a balanced diet.
2. Exercise regularly for at least 30 minutes daily.
3. Monitor blood pressure and cholesterol.
4. Avoid smoking.
5. Schedule annual health checkups.
